October 23-25, 2017

Adana-TURKEY

IS-25 BIOGAS POTENTIAL OF EREGLI CITY

Assist. Prof. Dr. Fatma Didem TUNCEZ

KTO Karatay University, KONYA

Turkey's growth and development goals mean that its energy need will increase rapidly in proportion to its growth. Meeting the increasing energy need from fossil fuels such as coal, oil and natural gas causes the depletion of natural resources. Another problem is that the increase in energy demand is increasingly met with imports. The solution of this problem is to diversify the energy supply with renewable energy sources. Biogas is one of the renewable energy sources. Biogas potential of Eregli District was revealed in this study.
